Languages (Proficient)

- Javascript
- Python
- Java/Kotlin
- Bash

Languages (Familiar)

- C
- Go
- Lua
- SQL

Technical Skills

- Experienced in Full-stack web development and protocols such as HTTPS, SSH, Web sockets, gRPC, etc.
- Good understanding of UI/UX design.
- Good knowledge of OO design and implementation of design patterns.
- Good foundation in data structures and good coding practices.
- Familiar with Docker, Docker Compose, AWS.

Personal Projects

HouseM8s

<https://github.com/tacobrando/HouseM8s>

<https://housem8s-2082efe081e6.herokuapp.com/>

- Designed and developed a PWA for facilitating task management.
- Aimed to simplify the organisation of chores and groceries in a shared living space.
- Implemented web sockets for real time updates and collaboration. i.e if a user has already completed a task.

Technologies: Javascript, Vue.js, Express.js, Web Sockets, Heroku, Tailwindcss.

ArcaneWonders plugin

<https://github.com/tacobrando/ArcaneWonders>

<https://www.spigotmc.org/resources/arcanewonders-w-i-p.112078/>

- Created a Minecraft game plugin adding teleportation portals.
- Provided a more user friendly interface of the teleport command to teleport to players/locations or a random location.
- Published plugin to a public plugin store and got 26 downloads in the first week.

Technologies: Kotlin, Spigot, Maven, Gradle

League Of Legends Stat Checker

<https://github.com/tacobrando/League-of-Legends-Stat-checker>

<https://guileless-puffpuff-c24618.netlify.app/>

- Created a web app to search and check League of Legends players statistics and game information such as match history.
- Developed a proxy API to interface with Riot Games API, mitigating CORS issues and enabling frontend integration.

Technologies: Nuxt.js, Netlify (Functions, Hosting),

Marketplace app

<https://github.com/tacobrando/CS50x-Final-Project>

- Created a full e-commerce web app that allowed users to buy/sell and view their selling items.
- Implemented password based authentication by hashing user passwords and storing them in sqlite.
- Integrated sessions and users cart items in Redis to allow users to quickly retrieve their authenticated session and view their cart without hitting the db.

Technologies: Python, Flask, Redis, Vue.js, Sqlite

Education

HarvardX CS50x - Dec 2022

- Completed and Awarded a Certificate for Completing CS50

Whiteboard Academy - August - September 2019

- Full-stack bootcamp using **AdonisJS**, **NodeJs**, **Vue.js**.

Oxford Brookes University - 2019 - 2022

- BSc in Anthropology

Relevant Work Experience

Freelance Web Developer - OXCHIBUS - SEP 2020

<https://oxchibus.co.uk/>

A historical map of Chinese businesses in Oxfordshire county, UK between 1910 - 1980.

- Worked with the client to understand business requirements and scope to set delivery timelines and expectations.
- Created and designed a website using Vue.js, which contained a google map with pins to mark historical Chinese businesses in Oxford.
- Integrated Google Maps API to mark pins of historical Chinese businesses in Oxford.
- Created a way for users to contribute to the map via a form and integrated with sendgrid to send email notifications for both the reviewer, to review, and contributor to acknowledge their contribution.

Technologies: Vue.js, Firebase (store, functions), Google Maps API, Sendgrid, Node.js

Software Engineer Intern - Zombiecrafter - JUN - AUG 2023

<https://zc.stephcraft.net/>

A game plugin for Minecraft similar to Call of Duty - Zombies

- Designed a reusable Structure System class that was used across the team to build custom composable structures. This allowed the team to reuse custom structures across the codebase and reduce the amount of duplicate structures.
- Developed and maintained player CLI commands

Technologies: Kotlin, Spigot, Gradle, Maven
